1Per capita and median household incomes are in 2011 inflation-adjusted dollars. All figures in Table 4 may be derived by calculating a weighted average.

Notes:
1. Per capita income, median household income and educational attainment data in the tables above are available down to the block group level.
2. American Community Survey (ACS) data are estimates only. Caution should be used when comparing to decennial census data. Further, comparisons with other ACS data time periods should be avoided.
3. Data may be estimated due to area of selection based on block group or tract level Census geography.
4. Data from the ACS are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error which is inherent for the data in this table. The 2006-2010 ACS 5-year estimates are averages over the period from January 1, 2007 to December 31, 2011.
